On behalf of the Dale Ridder and Mike Schumacher families, it is my pleasure to invite you to the First Annual Quality + Performance White & Red Bull Sale, April 4th at Ridder Farms near Hermann, MO. Ridder Farms and MBS Charolais have worked long and hard over the years to develop programs that are not only performance data driven but rooted in the commercial industry. It is their belief that Charolais cattle can and should be both practical and performance oriented.

Upon analyzing this offering, you will notice that all bulls have data – both EPD and ultrasound – with the only exceptions of bulls too old to ultrasound and the percentage lots. The average EPDs of all the bulls in the offering is quite impressive. This information, breed averages and definitives are on the next page. If you have any questions regarding the performance information, do not hesitate to ask Mike, Derek, or myself.

Whether you are looking for calving ease or performance and power, the bulls offered here are designed to put pounds on their calf crops and dollars in your pockets. If there is anything myself or any of the sale staff or hosts can do for you, please let us know. We look forward to seeing you on April 4!

## EPD DEFINITIONS

**Calving Ease Direct (CE)** is expressed as a difference in percentage of unassisted births in first calf heifers. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's calves will be born when bred to first-calf heifers.

**Birth Weight EPD (BW)** The expected difference in average birth weight (pounds) of progeny. Birth weight reflects prenatal growth.

**Weaning Weight EPD (WW)** The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

**Yearling Weight EPD (YW)** The expected difference in average yearling weight of progeny. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate.

**Maternal Milk EPD (MILK)** The genetic ability of a sire's or dam's daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.

**Calving Ease Maternal (MCE)** is expressed as a difference in percentage of unassisted births in first calf daughters. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Total Maternal EPD (MTNL)** A value to predict the weaning weight performance of calves from a animal's daughters due to genetics for growth and maternal ability. Total Maternal is calculated by adding ½ the WWT EPD to the Maternal Milk EPD.

**Scrotal Circumference EPD (SC)** The expected difference in scrotal circumference (expressed in centimeters) of a bull's or dam's male offspring at yearling compared to progeny of all other animals evaluated. Research has also indicated a relationship between increased SC EPD and decreased age at puberty for daughters.

## INDEX DEFINITION

**Terminal Sire Index (TSI)** The AICA Terminal Sire Index (TSI) is a formal method of combining Expected Progeny Differences (EPD) – BWT, WWT, YWT, REA, HCW, MARB and FAT – into one single value on which to base selection decisions. The TSI uses estimates of the genetic relationships between traits with an economic default value based on three year rolling USDA data.

*Carcass records are adjusted to an age constant endpoint. Therefore selection based on any or all of the carcass merit EPD are comparable among cattle at the same age endpoint.*

**Carcass Weight EPD (CW)** Expected progeny differences for Carcass Weight is a predictor of pounds of retail product at a constant age endpoint. Selection for increased values should result in heavier carcasses, while selection for decreased values should result in lighter carcass weights at the same age endpoint. Carcass Weight EPD are expressed in pounds.

**Ribeye Area EPD (REA)** Ribeye area is measured from a cross-sectional area of the longissimus dorsi muscle at the 12th rib. Ribeye area is a major component of the USDA yield grade equation and selection for increased ribeye area should result in larger ribeyes and lower yield grades between animals with the same carcass weight. Ribeye area has a positive relationship with weight, the larger the animal the larger the ribeye area. Ribeye Area EPD are expressed in square inches.

**Fat Thickness EPD (FAT)** Fat thickness is measured at the 12th rib and is the primary component to the USDA Yield Grade equation. Fat thickness has a negative relationship to cutability; therefore, selection based on decreased fat thickness should result in lower yield grades and leaner cattle given the same age endpoint. Fat Thickness EPD are expressed in inches.

**Marbling Score (MB)** Marbling is a subjective measure of the amount of intramuscular fat in the ribeye muscle. Marbling score is the primary component of USDA Quality grade and selection for increased Marbling Score EPD should result in cattle with higher quality grades at the same age endpoints. Marbling score has a small genetic correlation with fat, therefore producers may select for increased marbling score EPD while not changing external fat thickness when cattle are harvested at the same age-constant endpoint. Marbling EPD is a prediction of the differences in the USDA subjective marbling score between parent's progeny at an age constant endpoint. Marbling is expressed in the same units as the USDA Marbling Score.

## PERFORMANCE & ULTRASOUND MEASUREMENTS

**Birth Weight (BW)** An actual weight taken soon after the birth of the calf.

**Weaning Weight (AWW)** Weights are taken between 140 and 270 days of age and adjusted to calculate a 205-day weight (205 +/-65 days).

**Yearling Weight (AYW)** Yearling weights are taken between 320 and 410 days of age (365 +/- 45 days) to calculate a 365-day weight.

*Ultrasound data available was collected on calves between 320–430 days of age by an ultrasound technician fulfilling the certification requirements of the Beef Cattle Ultrasound Technician Annual Proficiency Testing and Certification (APTC) Program.*

**Ribeye Area (REA)** A cross-sectional image of the ribeye muscle between the 12th and 13th ribs (the last two ribs) of the animal.

**Rib Fat (RIB)** A scan also collected between the 12th and 13th rib of an animal. A measure of the amount fat thickness around the ribeye.

**Rump Fat (RUMP)** Collected between the hook and pin bones parallel to the backbone and is a measure of the amount of rumpfat on the animal.

**Intramuscular Fat (IMF)** The scan taken is a longitudinal image of the 11th-12th-13th rib region for estimation of percent IMF or marbling.
