50+ BULLS SELLING

CHAROLAIS | RED ANGUS | SIMMENTAL

HEALTH & REGISTRATION PAPERS:

All bulls are fertility-tested and will sell with proper interstate health certificates. Purebred Charolais bulls sell with registration papers and will be transferred to buyer upon payment.

BREEDING GUARANTEE:

Any bull that has been shown to lose fertility during the first six (6) months of ownership may be returned to seller at buyer's expense after notifying seller in writing. The bull must be in healthy condition and accompanied by proper health certificate. Seller has three (3) months to retest the bull to prove he is satisfactory or to replace with bull of equal value or give credit to future sale. Seller will be liable only to the extent of the purchase price in any settlement or adjustment made on the bull that proves to be a non-breeder. Limitations to genetic defects, not injuries. Injuries are to be backed by an insurance policy on the bull purchased by the buyer.

SEMEN INTEREST:

Ridder Farms reserves 1/4 semen interest in all bulls sold in this sale with an RF prefix. Potential collection at a later date will be at the buyer's convenience and seller's expense.

LOYALTY PROGRAM:

All buyers of the Ridder Farms 2021 Bull Sale will receive a 5% credit on the total purchase price from the 2021 Bull Sale to be used at the 2022 Bull Sale. Credits will be issued as cash reimbursements after settlement of the 2022 Bull Sale.

VOLUME DISCOUNT:

Discounts will be issued to buyers purchasing 2 or more bulls – 2% for 2 bulls with a cap of 5% on 5 or more bulls. Discounts will be issued as cash reimbursements after settlement of the 2021 Bull Sale.

TRACE & TRIGG

On behalf of the Dale Ridder family, it is my pleasure to invite you to this year's Annual Bull Sale and Family Values Female Sale. The process began over a year ago to merge the two events into a true production sale showcasing not only a powerhouse set of bulls but the awesome females that produced them.

Ridder Farms have worked long and hard over the years to develop a program that is not only performance data driven but rooted in the commercial industry. It is their belief that Charolais cattle can and should be eye appealing, practical and performance oriented.

Whether you are looking for calving ease or performance and power, the bulls offered here are designed to put pounds on their calf crops and dollars in your pockets. If you have any questions regarding the performance information do not hesitate to ask Derek, Dustin, or myself.

The female offering is what you come to expect from Ridder Farms –top notch. With a commitment to high quality and a drive to push forward genetically, the Ridders have decided to offer all females turning 6 yrs of age and older annually. These females represent the very best of the core cowherd and have proven their profitability for several years. The Family Values Sale would also not be complete without an elite offering of first-calf females.

If there is anything myself, the Ridder Family, or any of the sale staff or hosts can do for you, please let us know. See you in April!

	5.5	0.3	32	59	10	5.3	26	0.9	21	0.70	0.009	0.11	205.38

EPD DEFINITIONS

Calving Ease Direct (CE) is expressed as a difference in percentage of unassisted births in first calf heifers. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's calves will be born when bred to first-calf heifers.

Birth Weight EPD (BW) The expected difference in average birth weight (pounds) of progeny. Birth weight reflects prenatal growth.

Weaning Weight EPD (WW) The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

Yearling Weight EPD (YW) The expected difference in average yearling weight of progeny. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate.

Maternal Milk EPD (MILK) The genetic ability of a sire's or dam's daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.

Calving Ease Maternal (MCE) is expressed as a difference in percentage of unassisted births in first calf daughters. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Total Maternal EPD (MTNL) A value to predict the weaning weight performance of calves from a animal's daughters due to genetics for growth and maternal ability. Total Maternal is calculated by adding ½ the WWT EPD to the Maternal Milk EPD.

Scrotal Circumference EPD (SC) The expected difference in scrotal circumference (expressed in centimeters) of a bull's or dam's male offspring at yearling compared to progeny of all other animals evaluated. Research has also indicated a relationship between increased SC EPD and decreased age at puberty for daughters.

INDEX DEFINITION

Terminal Sire Index (TSI) The AICA Terminal Sire Index (TSI) is a formal method of combining Expected Progeny Differences (EPD) – BWT, WWT, YWT, REA, HCW, MARB and FAT – into one single value on which to base selection decisions. The TSI uses estimates of the genetic relationships between traits with an economic default value based on three year rolling USDA data.

Carcass records are adjusted to an age constant endpoint. Therefore selection based on any or all of the carcass merit EPD are comparable among cattle at the same age endpoint.

Carcass Weight EPD (CW) Expected progeny differences for Carcass Weight is a predictor of pounds of retail product at a constant age endpoint. Selection for increased values should result in heavier carcasses, while selection for decreased values should result in lighter carcass weights at the same age endpoint. Carcass Weight EPD are expressed in pounds.

Ribeye Area EPD (REA) Ribeye area is measured from a cross-sectional area of the longissimus dorsi muscle at the 12th rib. Ribeye area is a major component of the USDA yield grade equation and selection for increased ribeye area should result in larger ribeyes and lower yield grades between animals with the same carcass weight. Ribeye area has a positive relationship with weight, the larger the animal the larger the ribeye area. Ribeye Area EPD are expressed in square inches.

Fat Thickness EPD (FAT) Fat thickness is measured at the 12th rib and is the primary component to the USDA Yield Grade equation. Fat thickness has a negative relationship to cutability; therefore, selection based on decreased fat thickness should result in lower yield grades and leaner cattle given the same age endpoint. Fat Thickness EPD are expressed in inches.

Marbling Score (MB) Marbling is a subjective measure of the amount of intramuscular fat in the ribeye muscle. Marbling score is the primary component of USDA Quality grade and selection for increased Marbling Score EPD should result in cattle with higher quality grades at the same age endpoints. Marbling score has a small genetic correlation with fat, therefore producers may select for increased marbling score EPD while not changing external fat thickness when cattle are harvested at the same age-constant endpoint. Marbling EPD is a prediction of the differences in the USDA subjective marbling score between parent's progeny at an age constant endpoint. Marbling is expressed in the same units as the USDA Marbling Score.

PERFORMANCE & ULTRASOUND MEASUREMENTS

Birth Weight (BW) An actual weight taken soon after the birth of the calf.

Weaning Weight (AWW) Weights are taken between 140 and 270 days of age and adjusted to calculate a 205-day weight (205 +/-65 days).

Yearling Weight (AYW) Yearling weights are taken between 320 and 410 days of age (365 +/- 45 days) to calculate a 365-day weight.

Ultrasound data available was collected on calves between 320-430 days of age by an ultrasound technician fulfilling the certification requirements of the Beef Cattle Ultrasound Technician Annual Proficiency Testing and Certification (APTC) Program.

Ribeye Area (REA) A cross-sectional image of the ribeye muscle between the 12th and 13th ribs (the last two ribs) of the animal.

Rib Fat (RIB) A scan also collected between the 12th and 13th rib of an animal. A measure of the amount fat thickness around the ribeye.

Rump Fat (RUMP) Collected between the hook and pin bones parallel to the backbone and is a measure of the amount of rumpfat on the animal.

Intramuscular Fat (IMF) The scan taken is a longitudinal image of the 11th-12th-13th rib region for estimation of percent IMF or marbling.

**Right to Flush
SCR MS TURBO 7003**

She has been called the most beautiful, powerful female to ever come out of Sonderup Charolais Ranch. Turbo has set the bar high for her consistent production of high-selling progeny for many elite breeders. With 91 registered progeny at AICA, her first ten progeny sold at public auction averaged \$7,350! Since that time another daughter sold for \$13,000 and another was the Reserve Grand Champion at the 2015 Houston Livestock Show. She has went on to become a prominent donor in the breed for Bar J Charolais, JVS Charolais and Ridder Farms.
